TITLE Direct Submission  JOURNAL Submitted (16-MAY-2000) Department of Medicine and Genetics, University of Washington Genome Center, University of Washington, Box 35145, Seattle, WA 98195, USA  Box 35145, Seattle, WA 98195, USA  AUTHORS  JOBSES 1 to 24000)  AUTHORS  JORGEN SELVISSION  TITLE  Submitted (14-FEB-2003) Department of Molecular Biology and Biochemistry, Simon Fraser University, 8888 University Dr., Burnaby, British Columbia V5A 156, Ganada  COMMENT  This represents the February 3, 2003 version of the continually updated, reviewed, Pseudomonas acruginosa PAO1 genome annotation, from PseudoCAP (see http://www.pseudomonas.com for latest updates and links to alternate annotations). PseudoCAP is coordinated by Fions S.L. Britkman (Simon Fraser University, Canada) and Robert E.W. Hancock (University of British Columbia, Canada). We welcome submission through www.pseudomonas.com of any proposed changes.	'Protein name confidence' is used to rate our confidence of the accuracy of the protein name.  Class 1: Function experimentally demonstrated in P. aeruginosa.  Class 2: Function of highly similar gene experimentally demonstrated in another organism (and gene context consistent in terms of pathways its involved in, if known).  Class 3: Function proposed based on presence of conserved amino acid motif, structural feature or limited sequence similarity to an experimentally studied gene.  Class 4: Homologs of previously reported genes of unknown function, or no similarity to any previously reported sequences. Supported by NIH grants H300301 and H301428 (from the Human Genome Project and NCHGR). The entire sequence was independently determined from E. coli K12 strain M31655. Predicted open reading frames were determined using GeneMark software, kindly supplied by Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA, 3032 [e-mail: mark@amber.gatech.edu]. Open reading frames that have been correlated with genetic loci are being annotated with GS Site Nos., unique ID nos. for the genes in the E. coli Genetic Stock Center (GSC) database at Yale University, kindly supplied by Mary Berlyn. A public version of the database is accessible (http://cgsc.biology.yale.edu). Annotation of the genome is an ongoing task whose goal is to make the genome sequence more useful by correlating it with other data. Comments to the authors are appreciated. Updated information will be available at the E. coli Genome Project's World Wide Web site (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and its annotations are periodically updated; this is version M54. No sequence changes. Annotational assignments courtesy of Monica and products; all new functional assignments courtesy of Monica Riley; added promoters, protein binding sites, and repeated sequences described in reference 1. The unique numeric identifiers beginning with a lowercase 'b' assigned to each gene (protein or RNA-encoding) are now designated as gene synonyms instead of labels. This should allow them to be searched for in Entrez as gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /gunction="leader; Amino acid biosynthesis: Leucine"
